When determining security zones of landscapes of Tbilisi have to Cook main objectives of their creation, also their structural and functional features are considered.

Main objective of security zones of landscapes of Tbilisi is preservation of a historical part of the city (certain buildings, streets, the squares, quarters, etc.), architectural complexes, noteworthy places, archaeological monuments and elements of landscape architecture (gardens and parks). Security zones are also created for those territories which have no historical value, but influence development of urbanization space.

For delimitation of security zones of historical landscapes are considered: natural and topographical conditions, composite communication of a historical monument with the environment, degree of urbanization of territories, projects of regional planning.

In city boundaries of Tbilisi, on value, it is possible to allocate 4 security zones of landscapes. Except these, it is also necessary to allocate nature protection and esthetic zones which play a part in security and formations of landscapes of the city of Tbilisi.
