It is well known Professor Alexander Aslanikashvili Merit cartographic science theory formation and development. He created the original cartographic theory, the technical consumer cartographic science disciplines independent of elevated rank. Science has established cartographic receipt of cognition, language theory, basing the map, as the specific symbolic - semiotic system and its educational role, cartography introduced the notion of the content of the scale, has given us a cartography of the internal structure of the original scheme, ie Gave us the doctrine of the mapping object, the method and the language, which is one of the logical mapping system combines all branches of science.

However, Professor Alexander Aslanikashvili also successfully worked on the theory of geographical science. He wrote quite extensive and at the same time recognized several theoretical articles geographical science for them. Mr. Alexander has a reasonable geographic and chamoaqalibebuli which the subject of cognition, geographic and cartographic science and the unity of the essence of the system. As well as the articles of the theoretical geographic science important for a lot of other technical provisions. Alexander has not had time to master the theory of geographical science single textbook. However, he said that almost graduated from the geographical science of theoretical work. His commission from the country after the departure of the table were just a folder full of theoretical literature amonatserebita geographical and theoretical geography short textual notes.

The report covers the above-mentioned articles and scientific heritage of Professor Alexander Aslanikashvili theoretical work, geographical research and its future prospects in the production.
